SKILLS & RESEARCH INTERESTS

Research Interest: My research interests lie in paleoclimatology, paleoceanography, and organic geochemistry. During my Ph.D., I investigated the drivers and mechanisms of past climate variability in the Indo-Pacific Warm Pool using organic biomarkers preserved in marine sediments. By integrating geochemical proxy data with climate model simulations, my work seeks to constrain how key components of the climate system respond to rising CO₂ and abrupt climate changes on the geological timescales.

Computers: Python (experienced), MATLAB (experienced), Microsoft Word, PowerPoint, and Excel

Laboratory: GC-FID, GC-IRMS, HPLC, NuPerspective® Elemental Analyzer, Horiba LA-950V2 laser-diffraction particle size analyzer.
